

SDK FLUTTER

Add PDF tools and built-in document AI to your Flutter app

View, annotate, sign, fill forms, redact, and query documents with AI — all from one Dart package. Our Flutter PDF viewer SDK runs on iOS, Android, and web with no native code.

Flutter PDF SDK

What is a Flutter PDF SDK?

A Flutter PDF SDK is a toolkit that empowers developers to embed PDF viewing and handling of PDF documents across iOS, Android, and web platforms from a single codebase.

How to choose the right Flutter PDF SDK

Selecting the ideal Flutter PDF SDK is akin to choosing the perfect coffee blend for your taste.

Feature set — Does it support viewing, annotation, editing, and form filling?

Performance — Is it optimized for smooth rendering and responsive interaction?

Cross-platform support — Can it seamlessly operate across iOS, Android, and web platforms?

We use cookies to enable website functionality, analyse how our site is used, and personalize our marketing.

Click **Accept** to allow analytics and marketing cookies, or **Deny** to use only essential cookies.

DENY

Ease of integration — Does it offer clear documentation and straightforward integration steps?

Customization — Can you tailor the UI to align with your app's design language?

Why use Nutrient's Flutter PDF SDK to solve document integration needs?

Opting for Nutrient (formerly PSPDFKit) brings a handful of advantages:

- Unified codebase** — Develop once and deploy across multiple platforms, saving time and resources.
- Rich feature set** — Beyond basic viewing, it offers annotation, editing, form filling, and document security features.
- High performance** — Ensures smooth rendering and responsive interactions, even with large documents.
- Customization** — Tailor the user interface to match your app's aesthetics and user experience.
- Reliable support** — Access to comprehensive documentation and responsive customer support to assist during development.

How does Nutrient's Flutter PDF SDK compare to open source alternatives?

While open source options — like flutter_pdf view and pdf_renderer — offer basic functionality, they may lack advanced features, dedicated support, and regular updates. Nutrient's SDK provides a robust, enterprise-grade solution with continuous improvements and professional assistance, ensuring your app remains cutting-edge and reliable.
